1. Introduction

1.1 API Definition

An Application Programming Interface (API) is a mechanism that enables two software components to communicate with each other using a set of definitions and protocols. Prabhu Money Transfer Private Limited has developed an online Application Programming Interface (API) for partners to enroll in the customer onboarding process through E-KYC.

1.2 Requirements

To provide web services/APIs for sending partner, which allows sending partner to request services online, the following are a few pre-conditions:

- Partner must have an internet connection at their server.
- Partner needs to be registered on the Prabhu system.
- Partner needs to provide a public static IP address to Prabhu.
- Partner needs to provide the landing page (static URL) which is required to redirect after the E-KYC enrolment initiation from the partner's end.
- Prabhu will provide their partner with the necessary login credentials and other details.
- Prabhu will provide a test environment to their Partner and test all possible cases before going into live/production.

1.3 Request API URL (Test Environment)

- **Base URL**: https://ekyc.prabhuindia.com/test/v1

- **Token Generation API**
  - Endpoint: /auth/generatetoken

- **E-KYC Initiate API**
  - Endpoint: /customer/ekycinitiate

- **E-KYC Enrollment API**
  - Endpoint: /customer/ekycenrollment

- **Customer Onboarding API**
  - Endpoint: /customer/customeronboarding

CONFIDENTIAL

2. Token Generation API

Endpoint: https://ekyc.prabhuindia.com/test/v1/auth/generatetoken
JSON Request

{
"UserName": "string",
"Password": "string"
}

JSON Response

{
"SessionTimeout": "datetime",
"AccessToken": "string",
"StatusCode": 0,
"ResponseMessage": "string"
}

Request Fields				
Field Name	**Parameter Type**	**Data Type**	**Length**	**Description**
Username	Body	String	50	Provided by Prabhu
Password	Body	String	50	Provided by Prabhu
APIKey	Header	String	50	Provided by Prabhu
AgentCode	Header	String	25	Provided by Prabhu
Response Fields				
Field Name	**Parameter Type**	**Data Type**	**Length**	**Description**
SessionTimeout	Response	Datetime		Idle session time is 25 Minutes
AccessToken	Response	String	100	Alphanumeric Value
StatusCode	Response	Number		1 – Success 0 – Failed
ResponseMessage	Response	String	100	Response Message of 'Failed' or 'Success'.

CONFIDENTIAL

3. E-KYC Initiate API

Endpoint: https://ekyc.prabhuindia.com/test/v1/customer/ekycinitiate
JSON Request

{
"CustomerId": 0,
"PartnerUniqueRefNo": "string"
}

JSON Response

{
"Url": "string",
"StatusCode": 0,
"ResponseMessage": "string"
 	
}

Request Fields				
Field Name	**Parameter Type**	**Data Type**	**Length**	**Description**
CustomerID	Body	Number		Value of '**CustomerID'** responded from the "**CreateCustomer"** Method.
PartnerUniqueRefNo	Body	String	50	Unique reference number for the request by Partner {**Prefix+XXXXXX**}
APIKey	Header	String	50	Provided by Prabhu
AgentCode	Header	String	25	Provided by Prabhu
AuthenticationToken	Header	String	100	Value of '**Access Token'** responded from "**Token Generation API".**
Response Fields				
Field Name	**Parameter Type**	**Data Type**	**Length**	**Description**
URL	Response	String	500	Redirected to RBL Bank Page for Aadhaar Validation check.
StatusCode	Response	Number		1 – Success 0 – Failed
ResponseMessage	Response	String	100	Response Message of 'Failed' or 'Success'.

CONFIDENTIAL

4. E-KYC Enrollment API

Endpoint: https://ekyc.prabhuindia.com/test/v1/customer/ekycenrollment
JSON Request

{
"EncryptedPid": "string",
"EncryptedHmac": "string",
"SessionKeyValue": "string",
"CertificateIdentifier": "string",
"RegisteredDeviceServiceId": "string",
"RegisteredDeviceServiceVersion": "string",
"RegisteredDeviceProviderId": "string",
"RegisteredDeviceCode": "string",
"RegisteredDeviceModelId": "string",
"RegisteredDevicePublicKey": "string",
"CustomerId": 0,
"PartnerUniqueRefNo": "string"
}

JSON Response

{
"StatusCode": 0,
"ResponseMessage": "string"
}

Request Fields				
Field Name	**Parameter Type**	**Data Type**	**Length**	**Description**
EncryptedPid	Body	String	5000	**PID** generated from Device
EncryptedHmac	Body	String	500	**HMAC** generated from Device
SessionKeyValue	Body	String	1000	**S Key** from Device
CertificateIdentifier	Body	Integer	8	**CI** from Device
RegisteredDeviceServiceId	Body	String	100	**rdsid** returned by RD service using biometric
RegisteredDeviceServiceVersion	Body	String	100	**Rdsver** returned by RD service using biometric
RegisteredDeviceProviderID	Body	String	100	**Dpid** returned by RD service using biometric

CONFIDENTIAL

Request Fields				
RegisteredDeviceCode	Body	String	100	**dc** returned by RD service using biometric
RegisteredDeviceModelID	Body	String	100	**mi** value returned by RD service using biometric
RegisteredDevicePublicKey	Body	String	5000	**mc** value returned by RD service using biometric
CustomerID	Body	Number		Value of '**CustomerID'** responded from the "**CreateCustomer"** Method.
PartnerUniqueRefNo	Body	String	50	Unique reference number for the request by Partner {**Prefix+XXXXXX**}
APIKey	Header	String	50	Provided by Prabhu
AgentCode	Header	String	25	Provided by Prabhu
AuthenticationToken	Header	String	100	Value of '**Access Token'** responded from "**Token Generation API".**
Response Fields				
Field Name	**Parameter Type**	**Data Type**	**Length**	**Description**
StatusCode	Response	Number		0 – Failure 1 – Success
ResponseMessage	Response	String	100	Response Message of 'Failure' or 'Success'

CONFIDENTIAL

5. Customer Onboarding API

Endpoint: https://ekyc.prabhuindia.com/test/v1/customer/customeronboarding
JSON Request

<pre>{
"CustomerType": 0,
"SourceIncomeType": 0,
"AnnualIncome": 0,
"CustomerId": 0,
"PartnerUniqueRefNo": "string"
}</pre>

JSON Response

<pre>{
"StatusCode": 0,
"ResponseMessage": "string"
}</pre>

Request Fields				
Field Name	**Parameter Type**	**Data Type**	**Length**	**Description**
CustomerType	Body	Number		Describes the customer type in UAT **16 - Salaried** **15 - Self Employed including Professional** **14 - Farmer** **17 - Housewife.** Minor customer is not allowed. Describes the customer type in Production **1 - Salaried** **2 - Self Employed including Professional** **3 - Farmer** **4 - Housewife.** Minor customer is not allowed.
SourceIncomeType	Body	Number		Describes the customer source of income values in UAT **8 - Govt** **9 - Public sector** **10 - Private Sector**

CONFIDENTIAL

Request Fields				
				11 - Business **13 - Agriculture** **12 - Dependent** Describes the customer source of income values in Production **1 - Govt** **2 - Public sector** **3 - Private Sector** **4 - Business** **5 - Agriculture** **6 - Dependent**
AnnualIncome	Body	Number		Describes the customer annual income value in UAT **6 - Rs. 0.00 lacs to Rs. 2.00 Lacs** **7 - Rs. 2.00 Lacs to Rs. 5 Lacs** **8 - Rs. 5 Lacs to Rs. 10 Lacs** **9 - More than Rs. 10 Lacs** Describes the customer annual income values in Production **1 - Rs. 0.00 lacs to Rs. 2.00 Lacs** **2 - Rs. 2.00 Lacs to Rs. 5 Lacs** **3 - Rs. 5 Lacs to Rs. 10 Lacs** **4 - More than Rs. 10 Lacs**
CustomerID	Body	Number		Value of '**CustomerID'** responded from the "**CreateCustomer"** Method.
PartnerUniqueRefNo	Body	String	50	New Unique reference number for the request by Partner {**Prefix+XXXXXX**}
APIKey	Header	String	50	Provided by Prabhu
AgentCode	Header	String	25	Provided by Prabhu
AuthenticationToken	Header	String	100	Value of '**Access Token'** responded from **"Token Generation API".**
Response Fields				
Field Name	**Parameter Type**	**Data Type**	**Length**	**Description**
StatusCode	Response	Number		1 – Success 0 – Failure
ResponseMessage	Response	String	100	Response Message of 'Failure' or 'Success'

API Process Flow

1. New Customer enrolment process to Prabhu India

GetCustomer > No Record Found

Create Sender (with calling OTP method)

1.Token Generation API > Generate unique Access Token which needs to be passed while calling other APIs.

1.E-KYC Initiate API > Redirected to RBL Bank Page for Aadhaar Validation check.

1.E-KYC Enrollment API > Capture the customer's biometrics using a valid registered Biometric Device and pass that information.

1.Customer Onboarding API > Customer's additional information may need to be passed to onboard them in Prabhu System.

2. Existing customer enrolment to Prabhu India (Existing but not proceed for e-KYC)

GetCustomer > Record found with Customer ID

1.Token Generation API >Generate unique Access Token which needs to be passed while calling other APIs.

1.E-KYC Initiate API > Redirected to RBL Bank Page for Aadhaar Validation check.

1.E-KYC Enrollment API > Capture the customer's biometrics using a valid registered Biometric Device and pass that information.

1.Customer Onboarding API > Customer's additional information may need to be passed to onboard them in Prabhu System.
